

MAIZE LEVELLER

HYDRAULIC EXTENDING AND FOLDING ACTION

3 POINT, FRONT-END OR LOADER LINKAGE

SHIFTS SILAGE UP TO 135 CM IN HEIGHT

WORKING WIDTH OF UP TO 570 CM

300 CM TRANSPORT WIDTH

MAIZE LEVELLER

During the maize harvest, the distribution and compacting of silage can slow things down. Efficiency of the 'silage train' is constantly improving, meaning that hourly capacity is increasing dramatically.

The Holaras **maize leveller** is a must-have if you want to keep up with the pace. With the hydraulic **maize leveller**, the arriving maize can be distributed very quickly and efficiently. That means no more queuing silage trailers and tippers. Thanks to the leveller's individually extendable side wings, the edges of the silo can be filled to the top and neatly finished off. All leveller models can be fitted with lighting.

If your tractor or loader does not have enough hydraulic spool valves to fully operate the **maize leveller**, the implement can be fitted with an electro-hydraulic operating system for optimum use. This system can be combined with a universal Holaras remote control, allowing the central and wireless operation of all **maize leveller** functions.

The leveller can be attached to the tractor's 3 point linkage.

Both side panels fold in, giving the leveller a minimum transport width of 260 cm or 300 cm.

Can be front-end mounted or attached to a loader.

TECHNICAL SPECIFICATIONS
